

Algorithm

- ① Start
- ② Input two numbers $num1$ & $num2$ and store it in variable $num1$ & $num2$
- ③ Input the operators of user choice that needs to be performed.
- ④ If user choice is addition, then perform $num1 + num2$.
- ⑤ If user choice is subtraction, then perform $num1 - num2$.
- ⑥ If user choice is multiplication, then perform $num1 * num2$.
- ⑦ If user choice is division, then perform $num1 / num2$.
- ⑧ Print the value after doing the operations.
- ⑨ End.
